

I'm a Front-end tech lead with 8+ years of experience in modern web solutions, driving technical strategy, and leading cross-functional teams in agile environments. I bring a strong planning and design mindset — translating business goals into actionable technical roadmaps and aligning teams around scalable, well-structured front-end architecture. I'm adept at stakeholder collaboration, sprint planning, and elevating team performance through mentorship and hands-on technical guidance — with a growing focus on integrating AI-powered tooling to accelerate delivery and improve decision-making.

PROFESSIONAL EXPERIENCE

O'Reilly's Auto Parts | Senior Software Engineer (Tech Lead) | Remote | January 2023 - current

Helped maintain a legacy VueJS and Thymeleaf front end code base while mentoring junior devs in a scrum methodology. Evangelized for and helped lead the front end design of a modernized architecture, tech stack and design system for oreillyauto.com. Simultaneously led our SEO team in improving our Core Web Vitals and bettering our SERP by 50%. Collaboration tools included JIRA, Mattermost, Bitbucket, Zoom and Confluence. Tools utilized were DynaTrace, Akamai, WebPageTest, Figma. Integrated multi-agent Copilot into the work flow using the Claude Sonnet 4.6 and GPT-5.4 models.

E-By Design | Full Stack Software Engineer | Remote | October 2020 - December 2022

On a team that built a new web app with the goal of managing gaming product VIPs. Also helped with feature technical solutions/designs and implementations for our legacy product - the largest background check service in Canada. Leveraged VueJS using Nuxt 3 (with Pinia), GraphQL using Apollo, connecting to a Neo4J database using the Cypher Query Language. 3rd party tools included Okta for authentication, Twilio Client for in-app SMS and Voice calling features. Collaboration tools included Azure DevOps, Slack, Google Workspace and Zoom.

REI | Front End Software Engineer | Kent, Washington/Remote | September 2019 - April 2020

Part of the platform front end team that was tasked with improving Java based global templating using Thymeleaf for the micro front-end architecture to enable code reuse across multiple applications. Primary projects included maintaining Spring MVC libraries used by other REI engineers to convert the existing monolith to new microsites as well as having a focus on web performance improvements with the product pages. Collaboration tools included JIRA, Slack, MS Teams and Zoom.

Honor Tag | Full Stack Web Developer | Remote | August 2019 - March 2020

Co-developed a web app for military veterans to submit their military information to tell their story of their military experience. Leveraged Vue with Firebase using Stripe SDK as our payment platform, deploying via Netlify.

Halo Platform | Front End Web Developer | Remote | August 2018 - April 2019

Co-designed and developed the front end of a [player's hub web app](#), as well as a cryptocurrency-to-game-currency transfer system, for a blockchain based gaming ecosystem.

Fluke Corporation | Front End Web Developer | Everett, Washington | November 2017 - May 2018

Dedicated front end web developer on contract, building HTML/CSS/JS landing pages and emails for product launches, including maintaining 60+ global product websites in 30+ languages through various content management systems in a fast paced environment with tight deadlines.

PERSONAL PROJECTS

<https://monopoly-calc.com>

My first ever web app that calculates the total net worth of a Monopoly game winner

<https://yolkfolks.com>

An online egg marketplace that connects egg farmers and egg buyers.

<https://barrel-rate.com/>

A batting cage session results tracker to check hitting improvement progress.
